

Lab 2 Preprocessing

2026-01-15

Week 2 Preprocessing

Goal

Create a Scatter Plot to analyze the relationship between Distance and Pace.

Importing data

We can import Martins csv, or use the following code to download the same dataset.

```
file_id <- "1ymbNqfv9s6YGZzN93HFKAhjg0Z5xZXV1"
url <- paste0("https://drive.google.com/uc?id=", file_id)

df <- read.csv(url)
```

1.Create Distance and Pace Columns

Create a new DataFrame that contains:

- Distance in kilometres (km)
- Pace in minutes per kilometre (min/km)

Reminder:

Convert units before calculating pace.

##	Distance_km	Pace_min_km
## 1	8.7020	5.455537
## 2	8.3593	6.830601
## 3	8.3725	6.839010
## 4	6.8200	5.590965
## 5	2.7581	6.485084
## 6	5.5963	5.922767

Save csv

Save the dataframe to csv

```
write.csv(distancepace, "distancepace.csv", row.names = FALSE)
```
